# Ecommerce Application

In the magical world of Hogwarts school of Witchcraft and Wizardry, a new problem arose in the bustling streets of Diagon Alley. As students and wizards alike flocked to the shops to stock up on their wizarding supplies, they found themselves overwhelmed by the crowds and long lines. The demand for rare and specialised items was high, but the traditional brick and mortar shops were struggling to keep up. Harry, Ron, and Hermione being the resourceful trio that they were, saw an opportunity to solve this problem by creating an e-commerce app specifically for the wizarding community. They know the magic but lack the technology to do so. Help them by creating an Ecommerce App so that the wizards don't have to wait in long queues.

# TOOLS -that we will use

.js

React

# Basic Features

- **User Registration and Login:** Allow users to create accounts and log in securely.
- **Product Catalogue:** Display a list of products with details such as name, description, price, and images.
- **Search and Filter:** Enable users to search for products and filter them based on categories, price range, etc.
- **Shopping Cart:** Allow users to add products to their cart for future purchase.
- **Checkout Process:** Guide users through a secure checkout process, including shipping and payment information.
- **Order History:** Provide users with a history of their past orders.
- **Payment Gateway Integration:** Integrate popular payment gateways to facilitate secure transactions.

**THANK YOU !!**
